SUMMARY

Frontend engineer with **3+ years** of experience building SaaS dashboards in **React** for businesses. Owns features end to end, from **payments and scheduling to AR product customization and demo tooling**, and builds polished UI independently when no designer is available. Backed by **MERN and Next.js projects** with database transactions and authentication, built using **AI-assisted development (Gemini Pro)**, and comfortable working **across the stack**.

SKILLS

Frontend — HTML/CSS | JavaScript | React | Next.js | TypeScript | Tailwind CSS
Backend & Databases — Node.js | Express | Prisma | MongoDB | PostgreSQL
Tools & Others — Git | GitHub | Postman | Vercel | Render

WORK

Sprie (Percept Imagery) , *Frontend Developer* 12/2022 – 09/2026 | Ahmedabad, India

- **Dashboards:** Built React (CoreUI) Customer and Admin dashboards for the company's business clients, with data tables, charts, search, and pagination.
- **Meeting Scheduler:** Independently integrated a calendar library from its docs to build a meeting scheduler: full CRUD, live status, past-session history, and one-click join to SprieLive.
- **Stripe Payments:** Owned the frontend of the Stripe payment flow, from plan upsell and checkout to syncing plan and role into app state and redirecting users to unlocked features, and built the webhook endpoint that updates plans, with support from the tech lead and backend developer.
- **DITA Eyewear Customizer:** Built the customization UI from scratch, without a designer: users change frames, lens colors, and gemstones with a live AR preview (AR layer handled by the team manager).
- **SprieLive Demo Tool:** Built the demo interface on the company's real-time SDK: product visualization, component architecture, and API integrations that store demo data for post-meeting analytics.
- **AR and Virtual Try-On:** Integrated AR and virtual try-on previews into client dashboards.
- **Internship to Full-Time:** Started as a frontend intern and moved into a full-time Frontend Developer role after 9 months.

PROJECTS

Read Later App (AI Summarizer), , *Tech Stack: Next.js, Better Auth* 07/2026 – 08/2026

- Built an AI-powered tool that extracts key takeaways from long technical blogs.
- Used Jina AI to scrape and clean the article content from a user-provided link.
- Integrated Gemini 2.5 Flash to summarize the extracted article into key takeaways.

FlowPay (Payment App) 09/2025 – 11/2025

Tech Stack: React, Node.js, TypeScript, Tailwind CSS, MongoDB, Express.js, JWT

- Used MongoDB transactions (ACID) for P2P transfers, so no funds are lost if a network error occurs mid-transfer.
- Built friend search, balance management, and money transfers end to end.

PetSoft (Pet care stays organized) , *Tech Stack: Next.js, Prisma, PostgreSQL, NextAuth, Stripe* 04/2025 – 06/2025

- Built a pet daycare management app on the Next.js App Router and Server Actions, where paid users can add, view, edit, and delete pet records and search pets by name.
- Implemented NextAuth authentication and Stripe checkout that unlocks app access after a successful purchase.

EDUCATION

B.Sc. Chemistry, *L.J. University* 2018 – 2021 | Ahmedabad, India

Science, *Seventh Day Adventist School* 2018 | Ahmedabad, India
